

Highlights of the DMS *i100*

- User Friendly, Human Machine Interface.
- Alerts, Reacts and helps in Evacuation Automatically.
- Controls preemptive and reactive situations.
- Secures all Industrial and Commercial setups including hazardous areas, labour intensive sites, fully automated process plants and a combination of the above.
- Fully scalable to add new products and multi location control.

Other Solutions

People Management System

Visitor Management System, Contract Employee Management System, Time & Attendance System, HRMS System, Access Control System, RFID based tracking, Public Address System.

Security

Perimeter Security like fencing, intrusion detection; Electromechanical Equipments like turnstile, boom barriers, bollards;
Surveillance IP and Analogue;
Data Center Security which includes Rodent Control System, Water Leakage Detection System.

Safety

Fire Alarm System, VESDA System/Aspiration System, Fire Suppression System, Voice Guided Evacuation, People Count System.

Customized Solutions

Truck Turnaround System, GPS System, Fleet Management Solutions, Cab Driver Authentication Systems, etc.

Building Automation

Data Center Security System, Fire System, HVAC System, Lighting System, Energy System, Public Address System, Evacuation System and other such systems integrated into a Single Control.

Innovations and Excellence in Products & Services

Intsys Technologies Pvt. Ltd.

232, Diamond Industrial Estate, 2nd Floor,
Ketkipada Road, Near Toll Naka,
Dahisar (East), Mumbai - 400 068.

Innovations and Excellence in Products & Services

DMS *i100*

Disaster
Management
Solutions

“Intsys Technologies traditionally is an engineering company. Intsys has established itself with many technical innovations in the field of Process Automation, Embedded, Safety & Security solutions. Armed with excellent customer credentials, Intsys constantly surges ahead with Products and Solutions to suit different industrial needs.”

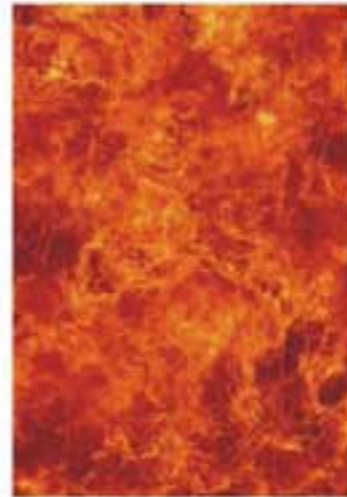

The DMS *i100* is one such solution for Disaster Management.

The need for DMS *i100*:

Safety of Personnel and Assets in the event of Industrial disasters are becoming increasingly important to Organisations. The need for swift, timely and appropriate action during disasters is fast becoming an integral part of any Industrial activity in dealing with hazards and risks.

Disaster management is an obvious necessity to guard against and mitigate the consequences of accidents.

DMS *i100* helps in Monitoring, Controlling and Managing unforeseen eventualities and helps Organisations focus on their goals.

DMS *i100*

Disaster Management Solutions

People Count System

During an Industrial Disaster, it becomes important to have data on the number of people trapped in different sections of the Plant. This module keeps track of People count across the Plant real time. Aided with access control tools and safety procedures, it is possible to identify the exact number of people left to be evacuated along with details on their names and areas where they could be trapped.

Fire Prevention, Detection & Extinguishing

The Fire Prevention, Detection & Extinguishing System helps in curbing the effects of fire, protecting & preventing spread of damage to life & property. This System works in three stages – Prevention, Detection & Extinguishing.

DMS *i100* integrates various systems

Surveillance

The system can be augmented by a network of closed circuit cameras and vision systems. Aided with modern network intelligence and software tools, manned or unmanned systems can be designed for an additional level of security and remote monitoring in case of Disasters.

Evacuation System

Safe evacuation of individuals from the organization in case of a disaster is of utmost importance. Evacuation System integrates the necessary aids and facilitates quick action.
